Current Market Conditions

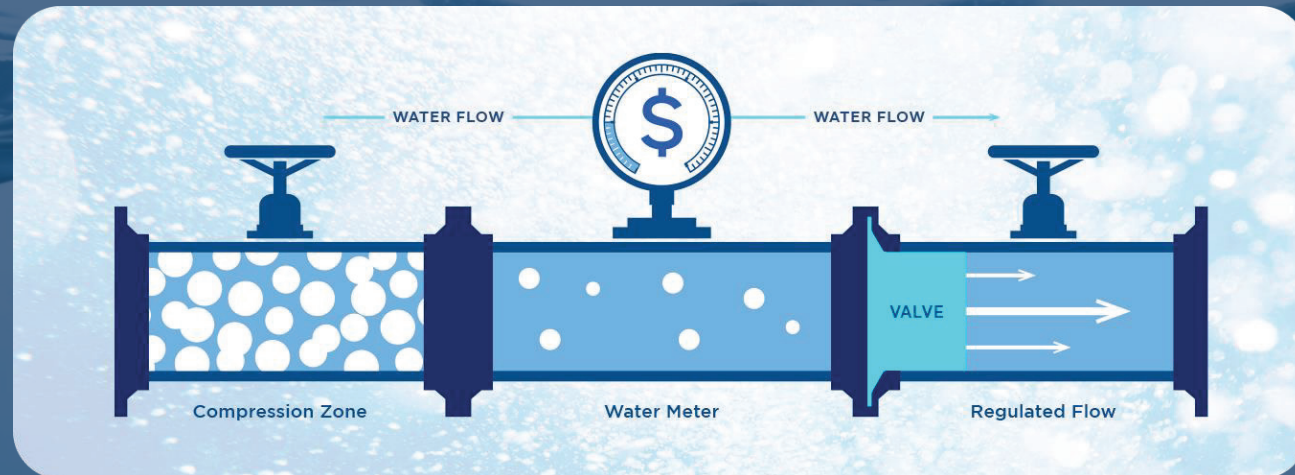

- The cost of water has risen 43% over the last decade!
- Growing population increasing demand for water and other commodities
- Business and industrial use of water is on the rise
- Pollution and waste is escalating water treatment costs
- Municipalities and Government are spending billions to upgrade aging infrastructure
- The approach is to fully recover costs from rate payers

Rates are Continuing to Rise!

Up 43% over Last Decade, Water Rates Rising Faster than Other Household Utility Bills

How Does It Work?

- **Air Compression** - Maintains a constant back pressure that eliminates volume of air in your water
- **Pressure and Flow Stabilization** - The SMART VALVE™ variable spring-loaded technology eliminates peaks and valleys and creates a smooth, even flow that keeps your meter readings more accurate.
- **Reduced Consumption** - we can precisely control the amount of pressure that your system needs
- **SMART VALVE™** act as a secondary backflow preventer to protect the municipal water supply
- Works on over 99% of all water meters in use

Smart Valve™ Water Savings Program Solution

- One-time installation
- Ability to adjust to changes
- Guaranteed Savings or your money refunded
- Your service and rental fee will never increase – although your water bill will.
- Service Replace and Repair at no cost for the term of your agreement.
